

Report on web application 'Golf results of Harri and his friends'

Harri Huotari
TAMK / Information Technology
Web Application Programming course
14.12.2016

Description

This web application program is a single page application for storing and viewing golf rounds. The main functionalities are shown in the figure below. This is the link to the web application: <http://home.tamk.fi/~c6hhuota/g3-hh.html#>.

On top of the above views there is a main page describing shortly the contents of the application. The data structures are developed as a part of CMD (conceptual modelling and databases) course. The database is done with MySQL workbench and it is located currently in TAMK infrastructure. Later it is planned to be transferred into some cloud service. The database is accessed with php interface. This web application is made with HTML and Angular Javascript. There is also a mobile application for storing scores during the golf round, which is developed in the Mobile Programming course as an Android application. This application complements mobile application as having more functionalities for maintaining information on players and courses in the database.
